## SignUp Calendar Page URL Variables

Article Number: 473 | Rating: 5/5 from 2 votes | Last Updated: Tue, Oct 11, 2016 at 3:59 PM

URL variables can be appended to your calendar link to specify certain settings. If your eventcalendar is at the URL <http://ues.evanced.info/signup/calendar>, we'll add URL variables like so:

<http://ues.evanced.info/signup/calendar?df=list&nd=30&kw=test>

The first variable you want to add, you need to start with a question mark. Every other variable, you start with an ampersand. It's pretty easy, and lets you build custom links!

*Note: prior to the August 2016 release of SignUp, URLs used the format*

*<http://ues.evanced.info/signup/eventcalendar.aspx>. Those URLs will redirect to the new format, but we encourage you to update your links to reflect the new format instead of relying on the redirects.*

*These are the variables we currently use:*

**Display Format - df= list, week or calendar** **Number of Days - nd= 30 - or any integer value overrides "df=calendar" switch and forces list view** **Keyword - kw= any single word or phrase - keyword searches on Description, Title and Presenter if a specific presenter is not specified.** **Date Start - ds= A date value in YYYY/MM/DD format. on list view, the events shown start at this date. on calendar view, the entire month passed is displayed.** **Date End - de= A date value in YYYY/MM/DD format. on list view, the events shown start at this date. this doesn't do anything on calendar view.** **Presenter - ps= any name, first, last or combined, of a desired presenter.** **Featured Events - fe= 1 - This displays featured events only.** **Ongoing Events - ongoing= 1 - This displays ongoing events with the rest of the events.** **Specific Library Branches - lib= 1 for single, where 1 is the library ID. 1,2,4,6,23 for multiple, where these numbers are the library IDs. No spaces.** **Specific Age Groups - ag= 1 for single, where 1 is the age group ID. 1,3,5,8,13 for multiple, where these numbers are the age group IDs. No spaces. input ag=all for every age group in your system to display** **Specific Event Types - et= 1 for single, where 1 is the event type ID. 3,1,4,15,92 for multiple, where these numbers are the event type IDs. No spaces. input et=all for every event type in your system to display** **Bypass Mobile Interface - nomobile= 1 - This bypasses the mobile interface and forces desktop interface.** **Staff Side Only Variables (these just don't work on patron side)** **Published flags - pub= 1 - Only published. 2 - Only unpublished. 3 - Both published & unpublished (default).**

**Custom Fields Applicable To:** All Users**Attachments:** No**Summary:** -
