

Managing Security in New Core Applications

Article Number: 679 | Rating: 1.5/5 from 2 votes | Last Updated: Sat, Feb 10, 2018 at 10:42 PM

Security within Evanced's new core applications (SignUp, Spaces, D!BS, and Wandoo Reader), as well as BrainHQ, consists of Users and Roles. Roles are created first and consist of granular permissions. Roles are then applied to users when new users are created. Roles are broken down by product. This allows you to grant a user a certain role for each product or no role for specific products if you do not wish to grant the user access to those products. Product-specific permissions are defined in the remainder of this article.

To review frequently asked questions about the new security process, please see [Frequently Asked Questions: Managing Security](#). To review default roles/permissions, please see [Default Security Roles](#).

Note: This security update does not affect our classic products such as Events, Room Reserve, and Summer Reader.

[Global](#)
[BrainHQ](#)
[D!BS](#)
[SignUp](#)
[Spaces](#)
[Wandoo Reader](#)

Permissions marked with an asterisk () are "Cross-Location" permissions and enable the user to perform the associated action for any location.*

GLOBAL

Images

allows access to the media uploader across all products

Add*	add a new image
Edit*	edit an existing image's details
^	^
