

Events Tiny Calendar Widget

Article Number: 331 | Rating: 1.5/5 from 4 votes | Last Updated: Thu, Oct 23, 2014 at 2:37 PM

Please note that working with widgets requires basic knowledge of HTML, CSS, and JavaScript code. The Tiny Calendar Widget allows you to embed a small version of your Evanced Events calendar on your web page. It will eventually look like the tiny calendar for our training sessions that is displayed on our knowledge base page (Attachment evanced_tinycal_new_onecal.html will give you this look):

month's label links to the full version of the calendar. The number for each day links to that date's events. To download the source code written by Evanced for this tiny calendar, download the desired attachment in this article below by right-clicking on the link and selecting "Save Target on your PC." Find in the source code of the downloaded file where the script line(s) mentioned below are, then modify the parts in red with your own tiny calendar link instead, as such: **Note: Attached to this article** At the bottom of the page, you will find three attachments (onecal, twocal, threecal). The difference is that one will show the calendar of just the current month, the second one will show this month and next month, and the last one will show this month and the next two months. Depending on which file you chose to download, you might have either both of those two lines below or just one. `<script`

```
type="text/javascript" src="http://demo.evanced.info/events/lib/tinycal.asp?monthcount=1&divid=eventstinycal"></script>
type="text/javascript" src="http://demo.evanced.info/events/lib
```

/tinycal.aspmonthcount=2&monthoffset=1&divid=eventshttp://test.evanced.info/libraryname/evanced/eventcalendar.asp So, let us say that your public calendar link reads: http://test.evanced.info/libraryname/evanced/eventcalendar.asp (This is not a real a link, just an example) then your tiny calendar link should be the same, except for the page name: http://test.evanced.info/libraryname/evanced/eventcalendar.asp

<http://test.evanced.info/libraryname/evanced/tinycal.asp> (This is not a real a link, just an example) ^ This means to replace the red part in the previous script with the following line, for the example on hand: ^

test.evanced.info/libraryname/evanced

Now, save the file and test it to make sure it works as expected. If it is working properly, do the following:

- 1- Copy the code between `<head>` and `</head>` tags, then paste it in your page's source code between the starting and ending of the head tag as well. Please make sure to address any style code issues with your code.
- 2- Copy the code between `<body>` and `</body>` tags, then paste it in your page's source code between the starting and ending of the body tag as well. Position the tiny calendar code within your page's code according to where you want it on the page.

Please note that Evanced's support is limited to the functionality of the tiny calendar and the way it loads independently, not its design after embedding on the customer's page. Also note that the original provided code offers calendars for three consecutive months (see attachment below labeled with "threecals" in its name). However, with manipulation of this original widget code, you can display only two or one, like the example in the screen shot above attachments labeled with "twocal" and "onecal" in their names respectively.
