

Summer Reader Language/Text Troubleshooting

Article Number: 489 | Rating: Unrated | Last Updated: Thu, Jan 24, 2013 at 8:04 PM

When Editing language files on Summer Reader, occasionally mistakes happen.

When this occurs, you may not see your changes populate on the patron side.

If a language is not loading for a specific program, it is due to one or more variables that have not been edited properly.

To determine if a language has been misconfigured, go to

System Setup --> [Language\Text Setup](#) and select the language from the list.

Click on the "Test" button - if there is a problem with one or more sections, an error message appears that names the specific section that has a problem. There are five different sections in a language configuration:
